PRE LED CELLUMA TREATMENT

DON'T go to a tanning bed two weeks prior to treatment. This practice should be discontinued due to the increased risk of skin cancer and signs of aging.

DON'T wax, tweeze or use depilatory creams for 7 days prior.

AVOID extended sun exposure especially in the 10 days prior to treatment.

DELAY use of Tretinoin, Retin-A, Renova, Differin, Tazorac, Avage, EpiDuo, Ziana and high-percentage AHA and BHA products for approximately seven days prior to treatment. Consult your Physician before temporarily discontinuing use of any prescription medications.

POST LED CELLUMA TREATMENT

DON'T put the treated area directly into a hot shower spray.

DON'T use hot tubs, steam rooms or saunas.

DON'T go swimming.

DON'T participate in activities that would cause excessive perspiration.

DON'T direct hair dryer onto the treated area.

DON'T apply ice or ice water to the treated area.

DON'T go to a tanning bed for at least two weeks post-procedure.

DON'T have electrolysis, facial waxing or use depilatories for approximately seven days.

DELAY approximately 15 minutes before applying foundation so the pH of the skin can stabilize. Treatments may cause slight redness, tightness, peeling, flaking or temporary dryness. Most patients find it unnecessary to apply makeup, as the skin will be smooth, dewy and radiant following treatment.

DELAY the application of over-the-counter medications or alpha hydroxy acid products for seven days after the procedure, as this may cause irritation.

DELAY the use of tretinoin, Retin-A, Differin, Renova, Tazorac, Avage, EpiDuo or Ziana **five days after the procedure**. Consult your physician before temporarily discontinuing use of any prescription medications.

AVOID direct sun exposure and excessive heat. Use the broad spectrum UV protection.

DO expect residual redness for approximately one to 12 hours post-procedure.
